Attention Students:

In some E&CE courses, we have created special sections for non-Engineering students. For Summer Semester these courses are:

- EE447 – undergraduates only
- EE547 – graduate students only
- EE432 – undergraduates only
- EE532 – graduate students only

Students who meet the pre-requisites and who have the permission of their academic advisor are welcome to register for the course without seeking further permission understanding:

1. Space is limited
2. Students will be expected to sign a document on the first day of class that they meet the stated requirements

There are also Engineering Sections of the same courses with different call numbers. They are ONLY open to Engineering Students who have seen an Engineering Advisor. Non-engineering students signing up for Engineering sections and Engineering students signing up for non-engineering sections will be administratively withdrawn. Graduate students signing up for undergraduate sections or vice versa will also be administratively withdrawn. (Exception: Undergraduate students who are taking the course for graduate credit in accordance with University policy should register for the graduate student section.)

If the section a student is qualified for is full, it is imperative that the student go on and try to register in the Access System. The list of students (and the time stamp on when they tried to register) is a significant input into priority for admission into class (on the first day of class). Please be aware if a student tries to register for the class a second time and fails, they “reset” their place in line to this second try. This is a limitation of the University system for registration.

Students who register for the wrong section will be administratively withdrawn when the registration in error is discovered.

Requests to add the class that are not satisfied by the Access Student Registration system will be reviewed and acted on at the first day of class meeting.

Each of these courses implement “Day-One” rules where students must attend the first day of class or risk their seat in the class if others are waiting. Students who have not been able to successfully register may come to the first day of class to see if late registration in the class is possible.

For “non-engineering sections” of EE447, EE547

The prerequisite for this course is a strong introduction to programming. The E&CE Department course EE233 and a computer science course in data structures are each
acceptable.

For non-engineering sections” of EE432, EE532
The prerequisite for this course is a basic familiarity with digital signals and class standing appropriate to the course being taken.
